About myself:

As a recent graduate, I hold a degree in IT Programming. However, my journey doesn't end there, and I am always working on my further education and practicing programming skills. I gained experience in the customer's working area, so I would be happy to get some personal attention from each client.

Programming is a kind of art that I can use to translate my ideas and to show my creative nature. My projects, which I am usually adding to my GitHub, will show my understanding in particular areas with some creative decisions that deliver the project to success.

I envision myself as a friendly colleague - a team player who contributes actively and fosters a supportive work environment. Collaboration fuels creativity, and I'm excited to bring my skills to your company.

Skills:

Web developing: HTML, CSS, JS and React

Version control: Git and GitHub

API related: Node.js, Json

Software engineering: C#, JS, React, Node.js, OOP

Mobile Apps developing: React Native Expo and Android Studio

Database developing: NoSQL (MongoDB), SQL and Microsoft SQL Management

Frames and diagrams designing: Figma, M3.material, Draw.io

Projects:

GoodJuice.inc

HTML, CSS, Json and JS

This is a website for a company that allows visitors to learn more about the company itself and its products in two different languages. A website is a simple and good example of where you can start to get to know unique businesses and their products.

Snake Game

React.js and CSS

It became a challenge for me to create and implement the mechanics for the game. The focus of this project is on the gameplay of the snake.

Web and mobile contacts' service

Node.js and React Native Expo

This project was created for companies that want to create a database of employees who need to keep and, if necessary, change private information. The database is implemented as a server, so you can connect to it both through the application and through the website.

Payroll system

C# with Windows Forms

This system was created for companies that need to reduce the time it takes to calculate and create payrolls for each employee. This application will be able to improve and reduce human factor problems for companies.

Education:

Google Business Certification	2024
--------------------------------------	------

Google Online

Certificate IV in IT (Programming)	2023
---	------

TAFE Petersham
